c/o SERC PC MMWG liaison
Benjamin Garffie
LG&E and KU Services Company as agent for
Louisville Gas and Electric Company and
Kentucky Utilities Company
1 Quality Street
9th Floor
Lexington, Kentucky 40507

Eastern Interconnection Reliability Assessment Group (ERAG) as the ERO's designee:

NERC RELIABILITY STANDARD MOD-032-1 DATA FOR POWER SYSTEM MODELING

NERC Reliability Standard MOD-032-1 Requirement 4 states that submitting power system modeling data to the Electric Reliability Organization (ERO) or its designee is the responsibility of the Planning Coordinators (PCs). To assist in meeting these requirements, the SERC Data Bank Update (DBU) process continues to be available through the 2020 reporting year for SERC member entities' PCs and Transmission Planners (TPs) to use as an optional process for data submittal to the ERO's designee as defined in Requirement 4.

System data submitted by each Balancing Authority (BA), Generator Owner (GO), Resource Planner (RP), Transmission Owner (TO), and Transmission Service Provider (TSP) includes the data requirements and reporting procedures developed by its respective PC and TP as required per MOD-032-1 Requirement 1. Because Load Serving Entity (LSE) is no longer a recognized NERC functional registration, these entities are not explicitly listed in the tables below.

Member entities within SERC who intend to have their system data submitted to the ERO or its designee utilizing the SERC DBU process are listed in Table 1. System data submitted in addition to data specified in MOD-032-1 will include, but are not limited to, Facility Ratings and coordinated Interchange schedules.

The SERC Data Bank Coordinator received data via the SERC Portal from the member entities listed in the first column of the enclosed Table 1, under "Planning Coordinator / Responsible Reporting Entity." These PCs, in turn, compiled data of several other SERC members listed in the second column under "Entities who have submitted data. Data includes only facilities and/or functional registrations located within the PC Area."

The registered entities using the SERC DBU process to demonstrate their compliance with MOD-032-1 acknowledge that they do so at their own risk. SERC Reliability Corporation does not guarantee that a registered entity's use of SERC's DBU process will be sufficient for demonstrating compliance with MOD-032-1.

Sincerely,

Graham Kirkpatrick
